

Preserver for Pest Inspectors

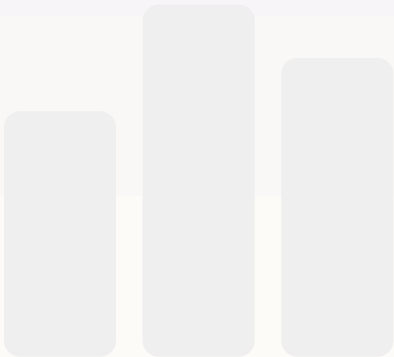

Timestamped findings and treatment records - AI drafts the inspection report.

Why **Pest Inspectors** Need Preserver

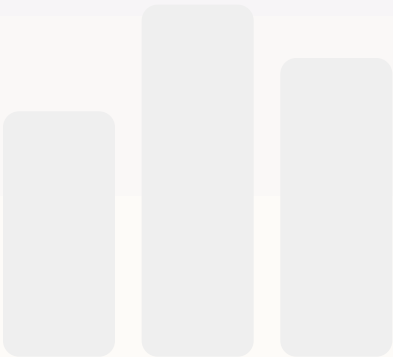

Pest inspections generate dozens of photos and observations per property. Preserver stamps every finding with GPS and time, then exports an AI-ready bundle so AI can draft the inspection report from your verified observations.

The Problem

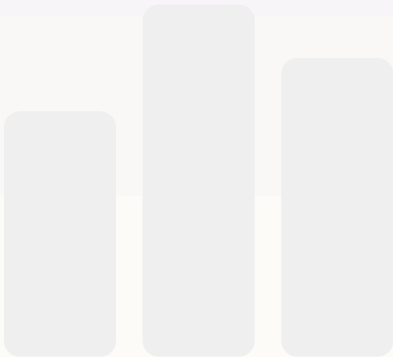

Dozens of findings per property, then hours writing them up at night. Photos scattered across a camera roll, notes on paper, reports running late.

The Solution

Every photo, video, voice note and text is automatically stamped with time, date and GPS at the moment of capture - offline, via satellite. Hash-verified. Nothing editable after the fact.

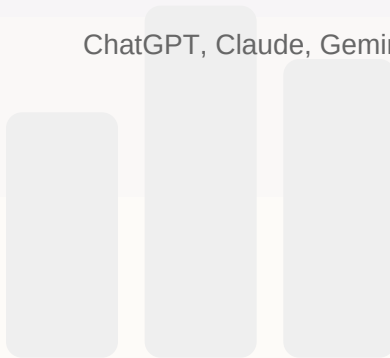

Field to Report

- 1. Capture as you work**
- 2. Auto-stamped - time, date, GPS**
- 3. Export the AI-ready bundle**
- 4. AI writes your pest inspection report**

ChatGPT, Claude, Gemini or Grok - grounded in your verified data.

What You Capture

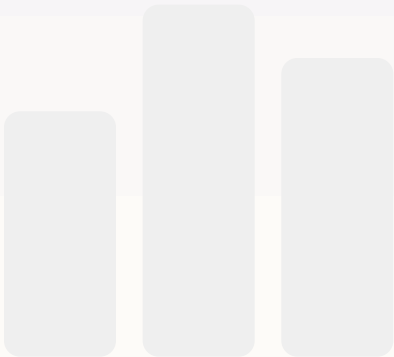

- Timestamped photos of every finding
- GPS-tagged inspection points across the property
- Hands-free voice notes as you work
- AI-ready export - report drafted from your data
- Works offline in roof voids and subfloors

AI Exports **Free** in Beta

Early users keep them free forever. Capture is free for everyone, always. We never train AI on your data - you choose which AI sees it.
