

Family Archive Report

Client: Demo data - privacy protected · Family history archiving session
Visit Date: 28 September 2026, 10:00 AM – 2:00 PM
Generated by: AI report assistant, from a Preserver field export

Summary

A family archiving session was carried out at home, covering a keepsake and heirloom check, an archive box and storage check, and a records and notes documentation review. All observations were captured using the Preserver app, with timestamp data recorded automatically alongside supporting photos and voice notes converted to text.

Keepsakes and heirlooms were identified and catalogued, the archive boxes were checked and organised by decade, and family notes were reviewed and documented ready to be passed down.

How This Report Was Produced

This report was generated from a single Preserver export — no re-typing, no separate note-taking app, and no manual GPS lookups. During the visit, every photo, voice note and text entry was captured in one place, each automatically stamped with the time and exact location it was recorded.

At the end of the visit, the activity was locked directly in the app, sealing the record so nothing could be altered after the fact. The full activity — photos, transcripts, GPS log and metadata — was then exported in one step (JSON + Photos) and handed to an AI assistant, which produced the structured report above in a matter of minutes.

The result: a defensible, timestamped record of the family archive, turned into a keepsake-ready file the same afternoon it was captured.
