

Tree Risk Assessment Report

Client: Demo data - privacy protected · Residential property visit
Visit Date: 28 September 2026, 8:30 AM – 9:10 AM
Generated by: AI report assistant, from a Preserver field export

Summary

A tree risk assessment was carried out at the property, covering the large gum tree near the rear fence, an overhanging branch near the power line easement, and a general equipment/safety check before works began. All observations were captured on-site using the Preserver app, with GPS location and timestamp data recorded automatically alongside supporting photos and voice notes converted to text.

The rear-fence tree showed a trunk cavity and one dead limb requiring removal, a branch was found encroaching on the power line clearance zone and flagged for priority trimming, and site safety equipment was confirmed present and in good condition before the job began.

Assessment Summary

Category	Observation	Status	Action Required
Trunk Condition	Cavity and dead limb on rear-fence gum tree	Attention	Schedule limb removal
Power Line Clearance	Branch encroaching on easement clearance zone	High Priority	Trim within 5 business days
Site Safety Equipment	Harness, helmet and rope bag checked, all serviceable	On Track	None

Field Evidence

The following images and captions were captured directly through the Preserver app during the visit. Each entry retains its original GPS coordinates and capture timestamp. Demo data - privacy protected.

Rear-fence gum tree — trunk cavity

-27.4689, 153.0235 · 28 Sep 2026, 8:34 AM

Visible cavity and one dead limb identified on the lower trunk, recommended for removal before further decay.

Power line easement — branch clearance

-27.4689, 153.0236 · 28 Sep 2026, 8:41 AM

Overhanging branch encroaching on the power line clearance zone, flagged as a priority trim.

Site setup — safety equipment check

-27.4688, 153.0234 · 28 Sep 2026, 8:47 AM

Climbing harness, helmet and rope bag laid out and checked before works commenced.

Voice & Text Observations

Observations below were recorded on-site as voice notes and automatically transcribed, or entered directly as text, through the Preserver app.

Time	Type	Transcript / Note
8:34 AM	Voice	"Gum tree out back has a cavity near the base, and there's a dead limb up top that needs to come off."
8:41 AM	Voice	"That branch over the fence line is getting close to the power line — want to get that trimmed back first."
8:47 AM	Text	Equipment check complete before climb — harness, helmet and ropes all serviceable.

Site Visit Log

8:30 AM	Activity started on-site — GPS lock confirmed, property address
8:34 AM	Rear-fence tree — photo + voice observation logged
8:41 AM	Power line clearance — photo + voice observation logged
8:47 AM	Safety equipment check — photo + text observation logged
9:10 AM	Activity ended and locked — record sealed, tamper-evident

How This Report Was Produced

This report was generated from a single Preserver export — no re-typing, no separate note-taking app, and no manual GPS lookups. During the visit, every photo, voice note and text entry was captured in one place, each automatically stamped with the time and exact location it was recorded.

At the end of the visit, the activity was locked directly in the app, sealing the record so nothing could be altered after the fact. The full activity — photos, transcripts, GPS log and metadata — was then exported in one step (JSON + Photos) and handed to an AI assistant, which produced the structured report above in a matter of minutes.

The result: a defensible, timestamped, location-verified record of the assessment, turned into a client-ready report the same day it was captured.
