

Environmental Site Survey Report

Client: Demo data - privacy protected · Waterway monitoring visit
Visit Date: 28 September 2026, 9:00 AM – 10:15 AM
Generated by: AI report assistant, from a Preserver field export

Summary

An environmental site survey was carried out along the creek corridor, covering a general waterway condition check, water quality sample collection, and a vegetation monitoring point survey. All observations were captured on-site using the Preserver app, with GPS location and timestamp data recorded automatically alongside supporting photos and voice notes converted to text.

The creek bank and water showed healthy native vegetation with clear water, water quality samples were collected at the designated point for lab testing, and the vegetation monitoring marker was located and surveyed against the baseline record.

Survey Summary

Category	Observation	Status	Action Required
Waterway Condition	Clear water, healthy native bank vegetation	On Track	None
Water Quality Sampling	Samples collected at designated point	Complete	Send to lab for analysis
Vegetation Monitoring	Marker point surveyed against baseline	On Track	None

Field Evidence

The following images and captions were captured directly through the Preserver app during the visit. Each entry retains its original GPS coordinates and capture timestamp. Demo data - privacy protected.

Creek bank — waterway condition

-27.3812, 152.8654 · 28 Sep 2026, 9:08 AM

Creek bank and water checked, clear water and healthy native reed growth observed.

Water quality — sample collection

-27.3812, 152.8654 · 28 Sep 2026, 9:35 AM

Water quality testing kit and sample bottles used to collect samples at the designated monitoring point.

Vegetation monitoring — marker survey

-27.3815, 152.8658 · 28 Sep 2026, 10:02 AM

Vegetation monitoring marker post located and surveyed against the baseline record.

Voice & Text Observations

Observations below were recorded on-site as voice notes and automatically transcribed, or entered directly as text, through the Preserver app.

Time	Type	Transcript / Note
9:08 AM	Voice	"Creek's looking healthy along this stretch, clear water and the native reeds are well established."
9:35 AM	Voice	"Collected water samples at the usual point, sending these off to the lab for the quarterly analysis."
10:02 AM	Text	Vegetation monitoring marker located and surveyed, condition consistent with baseline record.

Site Visit Log

9:00 AM	Activity started on-site — GPS lock confirmed, creek corridor location
9:08 AM	Waterway condition check — photo + voice observation logged
9:35 AM	Water quality sampling — photo + voice observation logged
10:02 AM	Vegetation monitoring — photo + text observation logged
10:15 AM	Activity ended and locked — record sealed, tamper-evident

How This Report Was Produced

This report was generated from a single Preserver export — no re-typing, no separate note-taking app, and no manual GPS lookups. During the visit, every photo, voice note and text entry was captured in one place, each automatically stamped with the time and exact location it was recorded.

At the end of the visit, the activity was locked directly in the app, sealing the record so nothing could be altered after the fact. The full activity — photos, transcripts, GPS log and metadata — was then exported in one step (JSON + Photos) and handed to an AI assistant, which produced the structured report above in a matter of minutes.

The result: a defensible, timestamped, location-verified record of the survey, turned into a client-ready report the same day it was captured.

Preserver

Free to capture. Record your observations — photo, video, voice or text — with GPS and timestamp on every entry. Export anywhere, including straight to AI. preserver.me
