

Forest Health Survey Report

Client: Demo data - privacy protected · Plantation survey visit
Visit Date: 28 September 2026, 7:00 AM – 8:20 AM
Generated by: AI report assistant, from a Preserver field export

Summary

A forest health survey was carried out at the plantation, covering a general canopy condition check, a bark beetle damage assessment, and a harvest boundary survey point check. All observations were captured on-site using the Preserver app, with GPS location and timestamp data recorded automatically alongside supporting photos and voice notes converted to text.

The general plantation canopy showed healthy, even growth, one stand showed bark beetle damage and resin bleeding requiring closer monitoring, and the harvest boundary survey points were confirmed against the GPS coordinates on file.

Survey Summary

Category	Observation	Status	Action Required
Canopy Condition	Healthy, even growth across most of the plantation	On Track	None
Bark Beetle Damage	Damage and resin bleeding on one stand	Attention	Monitor, flag for treatment
Boundary Survey	GPS survey points match harvest boundary records	Complete	None

Field Evidence

The following images and captions were captured directly through the Preserver app during the visit. Each entry retains its original GPS coordinates and capture timestamp. Demo data - privacy protected.

Plantation — canopy condition

-26.8912, 152.6543 · 28 Sep 2026, 7:10 AM

Wide view of the pine plantation showing healthy, even canopy growth.

Bark beetle damage — stand inspection

-26.8915, 152.6547 · 28 Sep 2026, 7:42 AM

Bark beetle damage and resin bleeding observed on one stand, flagged for monitoring.

Harvest boundary — survey point check

-26.8918, 152.6551 · 28 Sep 2026, 8:05 AM

GPS survey point checked against the marked harvest boundary tape.

Voice & Text Observations

Observations below were recorded on-site as voice notes and automatically transcribed, or entered directly as text, through the Preserver app.

Time	Type	Transcript / Note
7:10 AM	Voice	"Canopy's looking healthy across most of the block this morning, good even growth."
7:42 AM	Voice	"Found bark beetle damage on one stand, there's resin bleeding — worth flagging for a closer look."
8:05 AM	Text	Harvest boundary survey point checked, matches GPS coordinates on file.

Site Visit Log

7:00 AM	Activity started on-site — GPS lock confirmed, plantation location
7:10 AM	Canopy condition check — photo + voice observation logged
7:42 AM	Bark beetle damage — photo + voice observation logged
8:05 AM	Boundary survey — photo + text observation logged
8:20 AM	Activity ended and locked — record sealed, tamper-evident

How This Report Was Produced

This report was generated from a single Preserver export — no re-typing, no separate note-taking app, and no manual GPS lookups. During the visit, every photo, voice note and text entry was captured in one place, each automatically stamped with the time and exact location it was recorded.

At the end of the visit, the activity was locked directly in the app, sealing the record so nothing could be altered after the fact. The full activity — photos, transcripts, GPS log and metadata — was then exported in one step (JSON + Photos) and handed to an AI assistant, which produced the structured report above in a matter of minutes.

The result: a defensible, timestamped, location-verified record of the survey, turned into a forester-ready report the same day it was captured.

Preserver

Free to capture. Record your observations — photo, video, voice or text — with GPS and timestamp on every entry. Export anywhere, including straight to AI. preserver.me
