

Chiropractic Consultation Report

Client: Demo data - privacy protected · New patient consultation
Visit Date: 28 September 2026, 2:05 PM – 2:24 PM
Generated by: AI report assistant, from a Preserver field export

Summary

A new patient consultation was carried out at the clinic, covering the treatment room setup, a posture and spinal alignment assessment, and the patient intake documentation review. All observations were captured on-site using the Preserver app, with GPS location and timestamp data recorded automatically alongside supporting photos and voice notes converted to text.

Overall, the treatment room was set up and ready ahead of schedule, the posture assessment showed a mild lumbar alignment deviation consistent with the patient's reported symptoms, and intake documentation was completed in full. None of the findings were urgent, but each has been flagged for the treatment plan.

Visit Summary

Category	Observation	Status	Action Required
Treatment Room Setup	Table and equipment prepared ahead of appointment	Normal	No action required
Posture Assessment	Mild lumbar alignment deviation noted	Attention	Include in treatment plan
Patient Intake	Intake forms and consent documentation completed	Normal	No action required

Field Evidence

The following images and captions were captured directly through the Preserver app during the visit. Each entry retains its original GPS coordinates and capture timestamp. Demo data - privacy protected.

Treatment room — table and equipment setup

-27.4703, 153.0289 · 28 Sep 2026, 2:07 PM

Treatment table and spinal reference model set up ahead of the consultation.

Posture assessment — spinal alignment scan

-27.4703, 153.0290 · 28 Sep 2026, 2:14 PM

On-screen posture scan showing a mild lumbar alignment deviation, consistent with reported symptoms.

Reception — patient intake documentation

-27.4702, 153.0288 · 28 Sep 2026, 2:20 PM

Completed intake and consent forms reviewed at the reception desk.

Voice & Text Observations

Observations below were recorded on-site as voice notes and automatically transcribed, or entered directly as text, through the Preserver app.

Time	Type	Transcript / Note
2:07 PM	Voice	"Room's all set up, table's ready and the spinal model's out for the consult, running a few minutes early."
2:14 PM	Voice	"Posture scan's showing a mild lumbar deviation, lines up with what the patient described, noting it for the treatment plan."
2:20 PM	Text	Intake forms and consent documentation completed in full, no outstanding items.

Site Visit Log

2:05 PM	Activity started on-site — GPS lock confirmed, clinic
2:07 PM	Treatment room setup — photo + voice observation logged
2:14 PM	Posture assessment — photo + voice observation logged
2:20 PM	Patient intake — photo + text observation logged
2:24 PM	Activity ended and locked — record sealed, tamper-evident

How This Report Was Produced

This report was generated from a single Preserver export — no re-typing, no separate note-taking app, and no manual GPS lookups. During the visit, every photo, voice note and text entry was captured in one place, each automatically stamped with the time and exact location it was recorded.

At the end of the visit, the activity was locked directly in the app, sealing the record so nothing could be altered after the fact. The full activity — photos, transcripts, GPS log and metadata — was then exported in one step (JSON + Photos) and handed to an AI assistant, which produced the structured report above in a matter of minutes.

The result: a defensible, timestamped, location-verified record of the visit, turned into a treatment-plan-ready consultation report the same day it was captured.
