

Catering Function Report

Client: Demo data - privacy protected · Function catering job

Visit Date: 28 September 2026, 4:00 PM – 5:15 PM

Generated by: AI report assistant, from a Preserver field export

Summary

A function catering job was carried out on-site, covering a food prep and plating check, a service and glassware set-up check, and an ingredient prep quality review. All observations were captured on-site using the Preserver app, with GPS location and timestamp data recorded automatically alongside supporting photos and voice notes converted to text.

Food prep and plating were checked and confirmed ready for service, the glassware and beverage service set-up was checked and confirmed correct for the guest count, and the ingredient prep was reviewed for quality before service began.

How This Report Was Produced

This report was generated from a single Preserver export — no re-typing, no separate note-taking app, and no manual GPS lookups. During the visit, every photo, voice note and text entry was captured in one place, each automatically stamped with the time and exact location it was recorded.

At the end of the visit, the activity was locked directly in the app, sealing the record so nothing could be altered after the fact. The full activity — photos, transcripts, GPS log and metadata — was then exported in one step (JSON + Photos) and handed to an AI assistant, which produced the structured report above in a matter of minutes.

The result: a defensible, timestamped, location-verified record of the function, turned into a service-ready check the same afternoon it was captured.
