

Electrical Fault Job Report

Client: Demo data - privacy protected · Residential switchboard callout

Visit Date: 28 September 2026, 10:05 AM – 10:41 AM

Generated by: AI report assistant, from a Preserver field export

Summary

An on-site callout was carried out to investigate a tripping circuit breaker at the client's residence, covering a switchboard inspection, wiring continuity test, and a review of the affected power circuit. All observations were captured on-site using the Preserver app, with GPS location and timestamp data recorded automatically alongside supporting photos and voice notes converted to text.

The switchboard inspection identified a breaker showing scorch marks consistent with an intermittent overload, and a multimeter test flagged elevated resistance at a downstream junction box. A follow-up checklist item was logged for parts sourcing. None of the findings posed an immediate hazard, but the affected circuit was isolated as a precaution pending replacement parts.

Job Summary

Category	Observation	Status	Action Required
Switchboard	Breaker 4 shows scorch marks, intermittent trip	Attention	Replace breaker
Wiring Circuit	Elevated resistance at junction box, kitchen circuit	Attention	Re-terminate wiring
General Safety	Circuit isolated pending parts, no immediate hazard	Monitor	Follow-up visit scheduled

Field Evidence

The following images and captions were captured directly through the Preserver app during the visit. Each entry retains its original GPS coordinates and capture timestamp. Demo data - privacy protected.

Switchboard — breaker panel close-up

-27.4691, 153.0235 · 28 Sep 2026, 10:09 AM

Breaker 4 shows visible scorch marks, consistent with the reported intermittent tripping fault.

Wiring test — multimeter reading at junction box

-27.4690, 153.0234 · 28 Sep 2026, 10:22 AM

Multimeter test of the kitchen circuit junction box shows elevated resistance above normal tolerance.

Field tablet — fault checklist

-27.4691, 153.0236 · 28 Sep 2026, 10:35 AM

On-device checklist confirming isolation of the affected circuit and parts required for follow-up.

Voice & Text Observations

Observations below were recorded on-site as voice notes and automatically transcribed, or entered directly as text, through the Preserver app.

Time	Type	Transcript / Note
10:09 AM	Voice	"Breaker four's got some scorch marks on it, looks like it's been arcing intermittently. Going to isolate that circuit for now."
10:22 AM	Voice	"Junction box on the kitchen circuit is reading higher resistance than it should, probably a loose termination. Need to re-terminate that."
10:35 AM	Text	Circuit isolated as a precaution. Parts ordered for breaker replacement and junction re-termination, follow-up visit required.

Site Visit Log

10:05 AM	Activity started on-site — GPS lock confirmed, client residence
10:09 AM	Switchboard — photo + voice observation logged
10:22 AM	Wiring circuit — photo + voice observation logged
10:35 AM	Fault checklist — photo + text observation logged
10:41 AM	Activity ended and locked — record sealed, tamper-evident

How This Report Was Produced

This report was generated from a single Preserver export — no re-typing, no separate note-taking app, and no manual GPS lookups. During the visit, every photo, voice note and text entry was captured in one place, each automatically stamped with the time and exact location it was recorded.

At the end of the visit, the activity was locked directly in the app, sealing the record so nothing could be altered after the fact. The full activity — photos, transcripts, GPS log and metadata — was then exported in one step (JSON + Photos) and handed to an AI assistant, which produced the structured report above in a matter of minutes.

The result: a defensible, timestamped, location-verified record of the callout, turned into a client-ready electrical report the same day it was captured.

Preserver

Free to capture. Record your observations — photo, video, voice or text — with GPS and timestamp on every entry. Export anywhere, including straight to AI. preserver.me
