

Geotechnical Site Survey Report

Client: Demo data - privacy protected · Ground condition survey
Visit Date: 28 September 2026, 7:30 AM – 8:45 AM
Generated by: AI report assistant, from a Preserver field export

Summary

A geotechnical site survey was carried out at the proposed development site, covering an outcrop rock strata assessment, a soil borehole core logging session, and a groundwater monitoring well check. All observations were captured on-site using the Preserver app, with GPS location and timestamp data recorded automatically alongside supporting photos and voice notes converted to text.

The exposed rock strata were consistent with the regional geological mapping, core samples were logged showing expected layering with no unusual anomalies, and the groundwater monitoring well was checked and confirmed accessible for the next reading.

Survey Summary

Category	Observation	Status	Action Required
Rock Outcrop	Strata consistent with regional geological mapping	Complete	None
Borehole Core Log	Expected layering, no anomalies noted	On Track	None
Groundwater Well	Well head checked, accessible for next reading	Complete	Schedule next monitoring visit

Field Evidence

The following images and captions were captured directly through the Preserver app during the visit. Each entry retains its original GPS coordinates and capture timestamp. Demo data - privacy protected.

Rock outcrop — strata assessment

-27.6123, 152.7845 · 28 Sep 2026, 7:38 AM

Exposed rock outcrop assessed, strata consistent with regional geological mapping.

Borehole — core sample logging

-27.6127, 152.7850 · 28 Sep 2026, 8:05 AM

Soil and rock core samples laid out and logged, expected layering with no unusual anomalies.

Monitoring well — groundwater check

-27.6131, 152.7854 · 28 Sep 2026, 8:32 AM

Groundwater monitoring well head checked and confirmed accessible for the next reading.

Voice & Text Observations

Observations below were recorded on-site as voice notes and automatically transcribed, or entered directly as text, through the Preserver app.

Time	Type	Transcript / Note
7:38 AM	Voice	"Outcrop's showing exactly what we'd expect from the regional mapping, nothing unusual in the strata."
8:05 AM	Voice	"Core samples are logged, layering looks consistent with the borehole logs from the last survey."
8:32 AM	Text	Groundwater monitoring well checked, accessible and ready for the next scheduled reading.

Site Visit Log

7:30 AM	Activity started on-site — GPS lock confirmed, development site location
7:38 AM	Rock outcrop assessment — photo + voice observation logged
8:05 AM	Borehole core logging — photo + voice observation logged
8:32 AM	Groundwater well check — photo + text observation logged
8:45 AM	Activity ended and locked — record sealed, tamper-evident

How This Report Was Produced

This report was generated from a single Preserver export — no re-typing, no separate note-taking app, and no manual GPS lookups. During the visit, every photo, voice note and text entry was captured in one place, each automatically stamped with the time and exact location it was recorded.

At the end of the visit, the activity was locked directly in the app, sealing the record so nothing could be altered after the fact. The full activity — photos, transcripts, GPS log and metadata — was then exported in one step (JSON + Photos) and handed to an AI assistant, which produced the structured report above in a matter of minutes.

The result: a defensible, timestamped, location-verified record of the survey, turned into a client-ready report the same day it was captured.

Preserver

Free to capture. Record your observations — photo, video, voice or text — with GPS and timestamp on every entry. Export anywhere, including straight to AI. preserver.me
